

SiteSafe®

By

- Do you have concerns with the suitability of your current walling systems?
- Would you like an independent assessment and report on existing walling systems?
- Have you taken over a yard with walling that you want checking structurally?
- If you have roofing systems sitting on walls would you also like to have them checked?
- Would you like your facilities to be given a clean bill of health and signed off by a structural engineer?

If the answer to any of these is **YES**
you will benefit from

is a service to give you the piece of mind that existing walling and roofing systems are fit for purpose and are being used as they should be.

For a flat fee a representative will:

- Visit site to observe the current layout and walling/roofing systems
- Take details of the types, designs and how they are being used
- Observe what materials are involved and to what height they are stored
- The size and type of machines being operated

You will then receive a report based on our observations which will:

- Note where systems in place are working within design capability
- Highlight any areas of concern
- Recommend remedial actions to make the site safe
- Suggest any future proofing that could be implemented
- Be signed off by an RSG Director and our Structural Engineer

Can you afford not to be  SiteSafe?
